### **REPORT NO.** 28

DATE August 23, 2012

## **SUBJECT** CONFORMITY ANALYSIS FOR THE WFRC AMENDED 2040 REGIONAL TRANSPORTATION PLAN.

ABSTRACT The Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU) and the Clean Air Act Amendments (CAAA) require that all regionally significant highway and transit projects in air quality non-attainment and maintenance areas be derived from a "conforming" Regional Transportation Plan and Transportation Improvement Program. A conforming Plan or Program is one that has been analyzed for emissions of controlled air pollutants and found to be within emission limits established in the State Implementation Plan (SIP) or within guidelines established by Environmental Protection Agency (EPA) until such time that a SIP is approved. This conformity analysis is made by the Wasatch Front Regional Council (WFRC), as the Metropolitan Planning Organization for the region, and submitted to the Federal Highway Administration (FHWA) and the Federal Transit Administration (FTA) for their concurrence. This conformity analysis is being prepared according to the transportation conformity rulemakings promulgated by the EPA as of March 2010 and according to FHWA final rulemakings found in the SAFETEA-LU legislation. The EPA approved MOVES model for estimating vehicle emissions was used for this conformity analysis.

This conformity analysis addresses amendments in the Amended 2011-2040 RTP (RTP) made possible in part by additional transportation funds recently approved the Utah State Legislature. The projects include widening I-15 in northern Weber County, operational improvements to I-15 interchanges at 500 South and 2600 South in Davis County, and improvements to Cottonwood Street and Monroe Street in Salt Lake County.

Based on the analysis presented in this document, the Amended WFRC 2011-2040 RTP conforms to the State Implementation Plan or the Environmental Protection Agency interim conformity guidelines for all pollutants in applicable non-attainment or maintenance areas. Therefore, all the transportation projects in Weber, Davis, and Salt Lake Counties in the Amended 2011-2040 RTP are found to conform.

### A. Conformity Requirements

### **Conformity Process**

Since the commencement of the planning requirements in the late 1960s, further requirements (most recently the 2005 Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users and the 1990 Clean Air Act Amendments) have added to the responsibilities and the decision making powers of local governments through the Metropolitan Planning Organization. The Wasatch Front Regional Council (WFRC) is the Metropolitan Planning Organization for the Salt Lake and Ogden / Layton Urbanized Areas. This report summarizes WFRC's conformity analysis of the Amended 2011-2040 RTP with the Division of Air Quality's State Implementation Plan (SIP) and the Environmental Protection Agency's interim conformity guidelines. This conformity analysis is subject to public and agency review, and requires the concurrence of the Federal Highway Administration and Federal Transit Administration.

In November, 1993, the Environmental Protection Agency and the Department of Transportation issued rules establishing the procedures to be used to show that transportation plans and programs conform to the SIP. The conformity rules establish that federal funds may not be used for transportation projects that add capacity in areas designated as "non-attainment (or maintenance) with respect to the National Ambient Air Quality Standards", until and unless a regional emissions analysis of the Plan and TIP demonstrates that the projects conform to the SIP. This restriction also applies to "regionally significant" transportation project uses local funds exclusively.

Weber, Davis, and Salt Lake Counties, Salt Lake City, Ogden City and portions of Box Elder and Tooele Counties are designated as non-attainment (or maintenance) for one or more air pollutants. Specifically, there are four areas in the Wasatch Front region for which the conformity rules apply. These areas are listed in Table 1 below.

| Area  | Designation                  | Pollutant                               |
|---|------------------------------|---|
| Salt Lake City  | Maintenance Area             | Carbon Monoxide (CO)                    |
| Ogden City  | Maintenance Area             | Carbon Monoxide (CO)                    |
|   | Moderate Non-Attainment Area | Particulate Matter (PM <sub>10</sub> )  |
| Salt Lake County  | Moderate Non-Attainment Area | Particulate Matter (PM <sub>10</sub> )  |
| Salt Lake   | Moderate Non-Attainment Area | Particulate Matter (PM <sub>2.5</sub> ) |
| (including Davis, Salt Lake,<br>and portions of Weber, Box<br>Elder, and Tooele Counties) |                              |   |

Table 1Wasatch Front Region Non-attainment Designations

The CAAA established requirements for conformity. These requirements are outlined in 40 CFR 93.109 and include the following:

- Latest planning assumptions
- Transportation Control Measures (TCM)
- Emissions budget
- Project from a conforming plan and TIP
- PM<sub>10</sub> control measures

- Latest emissions model
- Consultation
- Currently conforming plan and TIP
- CO and PM<sub>10</sub> "hot spots"

Each of these requirements will be discussed in the following paragraphs.

### **Latest Planning Assumptions**

Current travel models are based on socioeconomic data and forecasts from local building permits, the Utah Division of Workforce Services, and the Governor's Office of Planning and Budget (GOPB). Socioeconomic data are from calendar year 2007. Forecasts of population and employment by traffic analysis zone were developed by WFRC in 2009 and 2010 and are tied to county-level forecasts published by GOPB in January, 2008.

### Latest Emissions Model

The conformity analysis presented in this document is based on EPA mobile source emissions models: MOVES for tailpipe emissions and AP-42 section 13.2.1 for paved road dust emissions. The application of these models will be discussed in greater detail in the Emissions Model section of this document. The mandated use of the new MOVES model begins in March 2013, but is used in this analysis nonetheless.

### **Consultation Process**

Section 105 of 40 CFR Part 93 (Conformity Rule) requires, among other things, interagency consultation in the development of conformity determinations. To satisfy this requirement, the State Division of Air Quality (DAQ) prepared a Conformity SIP document to outline the consultation procedures to be used in air quality and transportation planning. The Conformity SIP also defines the membership of the Interagency Consultation Team (ICT) as representatives from DAQ, WFRC, Mountainland Association of Governments, Utah Department of Transportation, Utah Transit Authority, EPA, FHWA, and the FTA. The Conformity SIP has been approved by EPA. WFRC followed the consultation procedures as outlined in the Conformity SIP in the preparation of this conformity analysis. As part of the consultation procedures defined in the Conformity SIP, WFRC presented this report to the Regional Growth Committee for review and comment. This committee includes a member of the Utah Air Quality Board as well as representatives of UDOT, UTA, and FHWA. In addition, management level staff members from the Utah Division of Air Quality are notified of meetings and agendas of the above committees. The Utah Division of Air Quality and other members of the ICT were also provided with a copy of this report at the beginning of the public comment period for the Amended 2011-2040 RTP.

This Conformity Analysis for the Amended 2011-2040 RTP was made available for public inspection and comment for a 30-day period in accordance with EPA conformity regulations. This analysis was also posted on the WFRC website at the beginning of the comment period. Notification of the comment period was sent by electronic mail to interested stakeholders. In addition, public comment was taken during various committee meetings of the Wasatch Front Regional Council, as well as public open houses with the express purpose of soliciting public comment on this document.

### **TCM Implementation**

A conformity analysis for the Amended 2011-2040 RTP must certify that nothing in the RTP interferes with the implementation of any Transportation Control Measure (TCM) identified in the applicable State Implementation Plan (SIP). There is one TCM from the original SIP section for the 1-hour ozone standard which has been carried forward to the current ozone maintenance plan, even though the 1-hour ozone standard has been revoked. This TCM, the employer-based trip reduction program, applies to local, state, and federal government employers. The program emphasizes measures to reduce the drive-alone rate such as subsidized bus passes, carpooling, telecommuting, and flexible work schedules. UTA has in place the ECO pass discount for a number of large employers including the University of Utah and Weber State University. Ridesharing, telecommuting, and flexible work schedules are programs currently managed, promoted, or operated by UTA Rideshare and the UDOT Travelwise program. Congestion Mitigation and Air Quality (CMAQ) funds and other transportation funds are used to support these ongoing programs.

### **Emissions Budget**

A comparison of mobile source emission estimates to emission budgets defined in the SIP is outlined in this document in Section D - Conformity Determination.

### **Currently Conforming Plan and TIP**

The existing 2040 RTP for the Wasatch Front Area conforms to State air quality goals and objectives as noted in a letter from FHWA and FTA dated June 17, 2011. The existing TIP for the Wasatch Front Area was also found to conform and this was noted in a September 30, 2010 letter from FHWA and FTA.

### Projects from a Conforming Plan and TIP

**TIP Time Frame** - All projects which must be started no later than 2017 in order to achieve the transportation system envisioned by the Amended 2011-2040 RTP are included in the 2012-2017 TIP. The TIP is fiscally constrained, meaning that only those projects with an identified source of funds are included in the TIP. Estimated funding availability is based on current funding levels and reasonable assumptions that these funds will continue to be available.

### **Regionally Significant**

All regionally significant projects, regardless of funding source (federal, state, or local) are included in the RTP. All regionally significant projects are also included in the regional emissions analysis of the RTP. Regionally significant projects are identified as those projects functionally classified as a principal arterial or higher order facility, and certain minor arterials as identified through the interagency consultation process (see Appendix 1 for a complete definition of regionally significant projects). The latest Utah Department of Transportation Functional Classification map was used to identify functional classification. Interstate highways, freeways, expressways, principal arterials, certain minor arterials, light rail, and commuter rail are treated as regionally significant projects.

Because of their relative impact on air quality, all regionally significant projects regardless of funding source must be included in the regional emissions analysis, and any significant change in the design or scope of a regionally significant project must also be reflected in the analysis. All regionally significant projects have been included in the regional emissions analysis, and the modeling parameters used for these projects are consistent with the design and scope of these

projects as defined in the RTP. In order to improve the quality of the travel model, other minor arterials and collectors, as well as transit service, are also included in the regional travel model (and thus the regional emissions analysis) but these facilities are not considered regionally significant since they do not serve regional transportation needs as defined by EPA. For a list of projects included in this conformity analysis please refer to Appendix 2 for Weber, Davis, and Salt Lake Counties, Appendix 3 for Box Elder County, and Appendix 4 for Tooele County.

### CO, PM<sub>10</sub> and PM<sub>2.5</sub> "Hot Spot" Analysis

In addition to the regional emissions conformity analysis presented in this document, specific projects within carbon monoxide (CO) and particulate matter ( $PM_{10}$  and  $PM_{2.5}$ ) non-attainment areas are required to prepare a "hot spot" analysis of emissions. The "hot spot" analysis serves to verify whether or not localized emissions from a specific project will meet air quality standards. This requirement is addressed during the NEPA phase of project development before FHWA or FTA can issue final project approval.

FHWA has issued guidance on quantitative  $PM_{10}$  and  $PM_{2.5}$  "hot spot" analysis to be used for the NEPA process.

### PM<sub>10</sub> Control Measures

**Construction-related Fugitive Dust** - Construction-related dust is not identified in the Utah SIP as a contributor to the  $PM_{10}$  non-attainment area. Therefore, there is no conformity requirement for construction dust. Section 93.122(d) (1) of 40 CFR reads as follows:

"For areas in which the implementation plan does not identify construction-related fugitive PM10 as a contributor to the non-attainment problem, the fugitive PM10 emissions associated with highway and transit project construction are not required to be considered in the regional emissions analysis."

In the Utah  $PM_{10}$  SIP, construction-related  $PM_{10}$  is not included in the inventory, nor is it included in the attainment demonstration or control strategies. Control of construction-related  $PM_{10}$  emissions are mentioned in qualitative terms in Section IX.A.7 of the SIP as a maintenance measure to preserve attainment of the  $PM_{10}$  standard achieved by application of the control strategies identified in the SIP. Section IX.A.7.d of the SIP requires UDOT and local planning agencies to cooperate and review all proposed construction projects for impacts on the  $PM_{10}$  standard. This SIP requirement is satisfied through the Utah State Air Quality Rules. R307-309-4 requires that sponsors of any construction activity file a dust control plan with the State Division of Air Quality.

### **Other Conformity Requirements**

**Transit Fares -** Transit fares have increased periodically and will continue to increase in response to rising operating costs. The Plan assumes that transit fare box revenues will cover a constant percentage of all transit operating cost, so future fare increases are consistent with the Plan. With any price increase some market reaction is expected. While there have been some short term fluctuations in transit patronage in response to fare increases, the implementation of light rail service and other transit improvements has retained and increased transit patronage consistent with the levels anticipated by the RTP.

Plans to expand light rail service, to increase and enhance bus service, and to extend commuter rail operations are moving forward. These transit projects are envisioned in the Plan and the steps necessary to implement these projects are moving forward including various voter approved sales tax increases for transit funding.

### **B.** Transportation Modeling

Improvement to the WFRC travel demand model practice and procedure is an ongoing process. This conformity analysis is based on the latest version (7.0) of the travel demand model. Version 7.0 of the travel demand model updates the base year of the model from 2005 to 2007. Version 7.0 of the model also has added more traffic analysis zones, and the transit mode choice portion of the model has been enhanced. Details of Version 7.0 of the travel model are documented in a report titled "WFRC/MAG Version 7.0 Travel Demand Model Documentation" which is available upon request.

### **Planning Process**

Federal funding for transportation improvements in urban areas requires that these improvements be developed through a comprehensive, coordinated, and continuous planning process involving all affected local governments and transportation planning agencies. The planning process is certified annually by the Regional Council and reported to the Federal Highway Administration and Federal Transit Administration. Every four years FHWA and FTA conduct a comprehensive certification review. The certification review of May 2009 found that the WFRC planning process meets federal requirements. Recommendations were made to improve WFRC's planning process and these are being addressed.

The documentation of the planning process includes at a minimum, a twenty-year Regional Transportation Plan updated at least every four years; and a four-year Transportation Improvement Program (capital improvement program) updated and adopted at least every four years. The planning process includes the involvement of local elected officials, state agencies, and the general public.

### **Travel Characteristics**

The WFRC travel model is used to estimate and forecast highway Vehicle Miles Traveled (VMT) and vehicle speeds for Weber, Davis, and Salt Lake Counties. A separate travel model is used to estimate VMT and speed in Tooele County. For VMT and speed estimates in Box Elder County, WFRC relied on forecasts provided by the Utah Department of Transportation. The WFRC travel demand model is based on the latest available planning assumptions and a computerized representation of the transportation network of highways and transit service. The base data for the travel demand model is reviewed regularly for accuracy and updates. The travel model files used for this conformity analysis are available upon request on compact disc.

Shown below in Table 2 is a summary of weekday VMT for the cities and counties in designated non-attainment areas. Totals for VMT are given for various air quality analysis years from 2010 to Amended 2011-2040. Note that the VMT values for Weber, Box Elder, and Tooele Counties are not

for the entire county but only that portion of the county designated as non-attainment for a criteria pollutant.

Table 2

| Vehicle Miles Tra |            | Winter Week | dav HPMS Adi | iusted)    |
|-------------------|------------|-------------|--------------|------------|
|                   | 2012       | 2020        | 2030         | 2040       |
| Salt Lake City    | 6,592,823  | 7,358,845   | 8,443,105    | 9,144,309  |
| Ogden City        | 1,565,100  | 1,760,857   | 2,000,296    | 2,213,951  |
| Salt Lake County  | 27,067,708 | 31,911,634  | 38,132,411   | 44,585,580 |

| Tooele County*    | 1,814,711  | 2,507,527   | 3,373,539    | 4,562,662  |

\*non-attainment portion of the county

### **Peak and Off-Peak Speeds**

The modeled VMT and speed for each time period (AM, midday, PM, and evening) defined in the travel demand model depend on the number of vehicle trips assigned for that time period. The percentage of trips by purpose varies for each time period. The percentages in Table 4a and Table 4b below are based on data from the 1993 Home Interview Survey and 2008 observed traffic count information. Trip purposes "commercial" (COM) and "through" (THRU) were not sampled in the Home Interview Survey. These two trip types are allocated to the four time periods according to the percentages for "non-home based" (NHB) and "internal/external" (IXXI) trips respectively (with some rounding as necessary for the COM trips).

IXXI - Internal/External, External/Internal

NHB - Non-Home Based COM - Commercial THRU - Through

### **Comparison of Modeled Speeds with Observed Data**

WFRC continues to adjust modeled speeds to improve consistency with samples of observed speeds. A review of Salt Lake County modeled speed and observed speed is summarized in Table 5. Modeled speeds in Table 5 are within -4.5% to 7.4% of observed speeds.

| Table 5   |

## C. Emission Modeling

### **I/M Programs**

Assumptions for the input files for EPA's MOVES vehicle emissions model include I/M programs in Salt Lake, Davis, and Weber Counties. Box Elder and Tooele Counties do not presently have I/M programs.

### VMT Mix

The VMT mix describes how much a particular vehicle type is used in the transportation network. While no longer a required input for the MOVES model as it was for MOBILE6.2, VMT mix is used in several instances to generate the input files required to run the MOVES model. The national default VMT mix found in the MOVES database was used to disaggregate local vehicle type data. The local vehicle type data is collected by UDOT as part of the federal HPMS data collection system and is based on automated counters which classify vehicles based on axle spacing. The UDOT classification is used to calculate control percentages for light duty (LD) vehicles and heavy duty (HD) vehicles for each facility type. The EPA default VMT mix is then applied to disaggregate the two UDOT control percentages into detailed percentages for the thirteen vehicle classes used in MOVES.

### Vehicle Weights

Facility specific VMT mix data described above was also used to estimate the average vehicle weight on each facility type. Since vehicle weight affects the rate of re-entrained road dust emissions estimated using the AP-42 method, vehicle weight variations on different facilities will affect the amount of fugitive dust created. The VMT mix for each facility type was used to estimate an average vehicle weight for each facility type with the following results:

| <b>Facility</b>  | Average Vehicle Weight  |
|------------------|-------------------------|
| Urban - Freeway  | 6,500 lbs, or 3.25 tons |
| Urban - Arterial | 6,100 lbs, or 3.05 tons |
| Urban - Local    | 3,900 lbs, or 1.95 tons |

### **Post Model Adjustments**

For conformity analyses prior to 2000, the WFRC applied post model adjustments to vehicle emission estimates. Emission credits for work trips were modeled for reductions in single occupant vehicle rates based primarily on increased investments in transit service and rideshare programs, and the projected increase in telecommuting. Other less significant post model adjustments were also estimated for incident management, pavement re-striping, and signal coordination. Other emission reducing programs and projects supported by CMAQ funds such as park and ride lots, bicycle facilities, transit vehicles, intelligent transportation systems (ITS), and intersection improvements have also been implemented.

WFRC believes that these programs have a positive effect in reducing vehicle emissions. In practice, however, WFRC has found that documenting the air quality benefits of these programs can be challenging. WFRC will continue to support these emission reduction programs, but credits from these programs have not been included in this conformity analysis.

### **MOVES Inputs**

The MOVES model is a very data intensive computer program based on the MySQL database software. Through the interagency consultation process the required MOVES inputs reflecting local conditions have been established.

Data files defining local conditions by county and year created for vehicle population, emission testing programs, fuel supply, fuel formulation, and vehicle age are listed in Table 6a below. Data files defining meteorological conditions conducive to elevated levels of pollution are also listed and remain consistent for all years modeled. For CO,  $PM_{10}$ , and  $PM_{2.5}$  pollution, winter weather conditions associated with temperature inversions are used because these conditions result in elevated pollution levels.

 Table 6a

 MOVES Data – Local Planning Assumptions

Vehicle activity input files are generated by the WFRC travel demand model using a customized inhouse program for this purpose. The files listed in Table 6b below with the "csv" extension are the MOVES input files for ramp fractions, road distribution, speed distribution, and VMT by vehicle type for each county (Box Elder, Davis, Salt Lake, Tooele, and Weber) and analysis year (2009, 2016, 2020, 2030, and 2040) as required for operating the MOVES model.

## Table 6eMOVES Data – Output Database Files

Each county and year scenario to be run in MOVES requires a command file or MOVES Run Specification file (MRS) which is identified by the "MRS" file extension. The command files used for this conformity analysis are listed in Table 6f.

## Table 6fMOVES Data – Run Specification Files

### **Road Dust Estimates**

In January 2011, the EPA released new guidance for estimating dust emissions from paved roads. These guidelines are published in Chapter 13.2.1 of the AP-42 document. The new formula is

$$E = k \, (sL)^{0.91} \, \mathsf{x} \, (W)^{1.02}$$

where:

E = particulate emission factor (grams/mile),

k = particle size multiplier for particle size range and units of interest (for  $PM_{10}$ , k=1.0 and for  $PM_{2.5}$  k=0.25),

sL = road surface silt loading (grams per square meter -  $g/m^2$ ), and

W = average weight (tons) of the vehicles traveling the road.

Based on vehicle type counts on roads in the WFRC region, average vehicle weights for local roads, arterials, and freeways are 1.95, 3.05, and 3.25 tons respectively. The silt load (sL) factor varies by highway functional class and by traffic volume. The default silt load factors found in Table 13.2.1-2 of the AP-42 document are summarized below.

| <b>Traffic Volume</b> | Functional Class | Silt Load (grams/meter <sup>2</sup> ) |
|-----------------------|------------------|---------------------------------------|
| 500-5,000             | local roads      | 0.200                                 |
| 5,000-10,000          | arterial roads   | 0.060                                 |
| limited access        | freeways         | 0.015                                 |

A precipitation reduction factor is also applied to the above equation using the following expression:

$$(1 - P/4N)$$

Where:

P = number of "wet" days with at least 0.254 mm (0.01 in) of precipitation during the averaging period, and

N = number of days in the averaging period (e.g., 365 for annual, 91 for seasonal, 30 for monthly).

The AP-42 guidance recommends a value of 90 precipitation days per year for the Wasatch Front region. Using these values, the precipitation reduction factor yields a value of 0.9384. Combined with the basic road dust emission rate, the net  $PM_{2.5}$  and  $PM_{10}$  road dust factors by highway functional class are as follows:

|                  | PM <sub>10</sub> Road | PM <sub>2.5</sub> Road |
|------------------|-----------------------|------------------------|
|                  | Dust Rate             | Dust Rate              |
| Functional Class | (grams/mile)          | (grams/mile)           |
| local roads      | 0.429                 | 0.107                  |
| arterials        | 0.226                 | 0.057                  |
| freeways         | 0.068                 | 0.017                  |

### **D.** Conformity Determination

The following conformity findings for the Amended 2011-2040 Regional Transportation Plan for the Wasatch Front are based on the transportation systems and planning assumptions described in this report and the EPA approved vehicle emissions model (MOVES).

### Salt Lake City CO Conformity

The carbon monoxide maintenance plan for Salt Lake City was approved by EPA effective September 30, 2005 as recorded in the Federal Register (Vol. 70, No. 146, August 1, 2005). The maintenance plan defines a motor vehicle emission budget for the years 2005 and 2019 of 278.62 tons/day. Table 7 below demonstrates that projected mobile source emissions are within the emission budget defined in the maintenance plan for the 2019 budget year. The other years listed in Table 7 are in accordance with requirements of the Conformity Rule (40 CFR Part 93) as noted in the table.

From this demonstration it is concluded that the Amended RTP conforms to the applicable controls and goals of the State Implementation Plan (Maintenance Plan) for Carbon Monoxide in Salt Lake City.

### **Ogden CO Conformity**

The carbon monoxide maintenance plan for Ogden City was approved by EPA effective November 14, 2005 as recorded in the Federal Register (Vol. 70, No. 177, September 14, 2005). The maintenance plan defines a motor vehicle emission budget for the years 2005 and 2021 of 75.36 and 73.02 tons/day respectively. Table 8 below demonstrates that projected mobile source emissions are within the emission budget defined in the maintenance plan for the 2021 budget year. The other years listed in Table 8 are in accordance with requirements of the Conformity Rule (40 CFR Part 93) as noted in the table.

From this demonstration it is concluded that the Amended 2011-2040 RTP conforms to the applicable controls and goals of the State Implementation Plan (Maintenance Plan) for Carbon Monoxide in Ogden City.

### **Ogden PM10 Conformity**

Ogden City was designated a  $PM_{10}$  non-attainment area in August of 1995 based on  $PM_{10}$  violations in 1993 or earlier. Since a  $PM_{10}$  SIP for Ogden has not yet been approved by EPA, it must be demonstrated that Ogden  $PM_{10}$  emissions are either less than 1990 emissions or less than "no-build" emissions. The analysis years 2012, 2015, 2025, and 2030 were selected in accordance with the requirements of 40 CFR Section 93.119(e).

 $PM_{10}$  emissions are present in two varieties referred to as primary and secondary  $PM_{10}$ . Primary  $PM_{10}$  consists mostly of fugitive road dust but also includes particles from brake wear and tire wear and some "soot" particles emitted directly from the vehicle tailpipe. The methods defined in the January 2011 version of the EPA publication known as "AP-42" were used to estimate dust from paved roads. Secondary  $PM_{10}$  consists of gaseous tailpipe emissions that take on a particulate form through subsequent chemical reactions in the atmosphere. Nitrogen oxides are the main component of secondary  $PM_{10}$  emissions with sulfur oxides a distant second.

As summarized in Tables 9a and 9b, emission estimates for the Amended 2011-2040 RTP satisfy the "Build < 1990" test for secondary  $PM_{10}$  (NOx precursors) and primary  $PM_{10}$  (direct tailpipe particulates and road dust) in Ogden City. The 1990 emission estimates based on the Mobile6.2 vehicle emissions model for the 2003 conformity analysis have been updated for this conformity analysis using the MOVES model and the January 2011 AP-42 road dust methodology for consistency with current emission modeling requirements. Specifically, the NOx precursor budget (1990 emission estimate) changes from 4.57 tons/day to 6.92 tons/day, and the direct PM10 budget (1990 estimate) changes from 2.28 tons/day to 1.09 tons/day. The 1990 primary  $PM_{10}$  estimate for Ogden City includes emissions from the unpaved access road to the Ogden landfill which was closed in 1998.

For projections of primary  $PM_{10}$  emissions, no credit was taken for a number of programs adopted since Ogden City last violated the  $PM_{10}$  standard. These particulate reducing programs include covered load ordinances, increased frequency of street sweeping, and reduced application of deicing and skid resistant materials (salt and sand). Documentation of these programs has been provided by Ogden City but the actual benefits of these programs are not included in the emission projections below. Other areas that have estimated the benefit of these programs have found a silt load reduction of over 30% for effective street sweeping programs and a 5% silt load reduction when limiting the amount of sand and salt applied to the roads. Ogden City has also implemented a number of specific projects that have a positive effect in reducing particulate emissions including park and ride lots, storm water improvements, shoulder widening and edge striping, and addition of curb and gutter on several projects.

From this demonstration it is concluded that the RTP conforms under the Emission Reductions Criteria for areas without motor vehicle emissions budgets for  $PM_{10}$  in Ogden City.

### Salt Lake County PM10 Conformity

The  $PM_{10}$  SIP for Salt Lake County does not define a budget beyond the year 2003. Therefore, conformity tests are required only for analysis years which are identified in accordance with 40 CFR 93.118. All analysis years after 2003 must meet the 2003 budgets for primary particulates and secondary particulates (see the discussion above under Ogden  $PM_{10}$  Conformity for an explanation of primary and secondary  $PM_{10}$  emissions). The State air quality rule R307-310 allows a portion of the surplus primary  $PM_{10}$  budget to be applied to the secondary  $PM_{10}$  budget for conformity purposes as seen for the year 2015 in Table 10 below. For the analysis years 2020, 2030, and 2040, no budget adjustments were necessary.

### Table 10

### Salt Lake County - PM10 Budgets Direct (Dust) and Precursor (NOx) PM10 Emission Budgets

|                                 | (tons/day) |       |       |       |
|---------------------------------|------------|-------|-------|-------|
| Year                            | 2015       | 2020  | 2030  | 2040  |
| Total PM10 Budget <sup>#</sup>  | 72.60      | 72.60 | 72.60 | 72.60 |
| Direct PM10 Budget to be Traded | 10.00      | 0.00  | 0.00  | 0.00  |
| Direct PM10 Budget              | 30.30      | 40.30 | 40.30 | 40.30 |
| NOx Precursor PM10 Budget       | 42.30      | 32.30 | 32.30 | 32.30 |

Table 11a and Table 11b below demonstrate that projected mobile source emissions are within the emission budget defined in the SIP. The years listed in Table 10a and Table 10b are in accordance with requirements of the Conformity Rule (40 CFR Part 93) as noted in the tables.

From this demonstration it is concluded that the RTP conforms to the applicable controls and goals of the State Implementation Plan for  $PM_{10}$  in Salt Lake County.

### Salt Lake PM<sub>2.5</sub> Conformity

### (Includes Davis, Salt Lake, and portions of Weber, Tooele, and Box Elder Counties)

Davis, Salt Lake, and portions of Weber, Tooele, and Box Elder Counties have been designated as non-attainment areas under the new PM<sub>2.5</sub> standard ( $35 \mu g/m^3$ ) that was established in 2006. Work has begun on a PM<sub>2.5</sub> section of the State Implementation Plan which will establish a motor vehicle emission budget for emissions associated with PM<sub>2.5</sub>. Until the PM<sub>2.5</sub> SIP is completed and approved by EPA, PM<sub>2.5</sub> interim conformity requirements apply. EPA interim conformity for PM<sub>2.5</sub> emissions requires that future NOx emissions (a precursor to PM<sub>2.5</sub>) and primary particulate emissions not exceed 2008 levels.

Table 12a below demonstrates that projected mobile source emissions of NOx (a precursor to  $PM_{2.5}$  emissions) in the five-county  $PM_{2.5}$  non-attainment area are less than 2008 NOx emissions. Table 12b below demonstrates that direct particle emissions of  $PM_{2.5}$  in the five-county  $PM_{2.5}$  non-attainment area are also less than 2008 direct particle emissions. Direct particle emissions include exhaust emissions of gasoline particulates, elemental carbon, organic carbon, and sulfates (SO4); and mechanical emissions from brake wear and tire wear.

From this demonstration it is concluded that the RTP conforms under the interim conformity guidelines for  $PM_{2.5}$  areas without an approved motor vehicle emissions budget for the Salt Lake  $PM_{2.5}$  non-attainment area.

### Salt Lake and Davis County Ozone Conformity

The 1-hour ozone standard was revoked on June 19, 2005. Therefore, a conformity analysis under the 1-hour ozone standard in Salt Lake and Davis Counties is no longer required.

The current 8-hour ozone standard is 75 ppb. All counties within the Wasatch Front area are in attainment of the current 8-hour ozone standard.

## **Appendix – 1** Definition of Regionally Significant Projects

### Process for Determining Regionally Significant Facilities for Purposes of Regional Emissions Analysis (see CFR 93.105.2.c.1.ii)

<u>Background</u>: 40 FR 93.101 defines "regionally significant project" and associated facilities for the purpose of transportation conformity. The federal definition does not specifically include minor arterials. The following definitions and processes will be used by the Wasatch Front Regional Council (WFRC) and Mountainlands Association of Governments (MAG) in consultation with DAQ, UDOT, UTA, FHWA, FTA, and EPA to determine which facilities shall be considered regionally significant for purposes of regional emissions analysis. It is the practice of the MPO to include minor arterials and collectors in the travel model for the purpose of accurately modeling regional VMT and associated vehicle emissions. The inclusion of minor arterials and collectors in the travel model for the purpose of accurately modeling the travel model, however, does not identify these facilities as regionally significant.

- 1. Any new or existing facility with a functional classification of principal arterial or higher on the latest UDOT Functional Classification Map (currently found at <u>http://www.dot.utah.gov/index.php/m=c/tid=1228</u>) shall be considered regionally significant.
- 2. Any fixed guide-way transit service including light rail, commuter rail, or portions of bus rapid transit that involve exclusive right-of-way shall be considered regionally significant.
- 3. As traffic conditions change in the future, the MPO's in consultation with DAQ, UDOT, FHWA, and EPA (and UTA and FTA in cases involving transit facilities) will consider 1) the relative importance of minor arterials serving major activity centers, and 2) the absence of principal arterials in the vicinity to determine if any minor arterials in addition to those listed in Exhibit A should be considered as regionally significant for purposes of regional emissions analysis.

### Exhibit A Minor Arterials Determined to be Regionally Significant for Purposes of Regional Emissions Analysis

In consultation with DAQ, UDOT, FHWA, and EPA; and based on inspection and engineering judgment of current traffic conditions; and based on application of the "Process for Determining Regionally Significant Facilities for Purposes of Regional Emissions Analysis" agreed upon by the aforementioned agencies; the WFRC and MAG designate the following minor arterials as regionally significant.

### Salt Lake County

300 West/Beck Street: 600 South to I-15 U-111: SR-201 to New Bingham Highway New Bingham Highway: U-111 to 9000 South

### **Davis County**

Syracuse Road: I-15 west to Antelope Island SR-108 (2000 West): Syracuse Road to Weber County line

### Weber County

SR-108 (3500 West): Davis County line to Midland Drive SR-108 (Midland Drive): 3500 West to Hinckley Drive SR-79 (Hinckley Drive): SR-108 to I-15

### Utah County

Redwood Road: Salt Lake County line to Highway-73

### Process for Determining Significant Change in Design Concept and Scope for Purposes of Regional Emissions Analysis (see CFR 93.105.2.c.1.ii)

Changes to regionally significant projects may or may not necessitate a new regional emissions analysis. The following definitions and processes will be used to determine what changes to project concept and scope are to be considered significant or not for purposes of regional emissions analysis.

- 1. Adding or extending freeway auxiliary lanes or weaving lanes between interchanges is not considered a significant change in concept and scope since these lanes are not normally included in the travel model.
- 2. Adding or extending freeway auxiliary/weaving lanes from one interchange to a point beyond the next interchange is considered a significant change in concept and scope.
- 3. A change to a regionally significant project defined in the Regional Transportation Plan that does not change how the project is defined in the travel model is not considered a significant change in concept and scope. These changes include but are not limited to lane or shoulder widening, cross section (other than the number of through lanes), alignment, interchange configuration, intersection traffic control, turn lanes, continuous or center turn lanes, and storage lanes.
- 4. A change to a regionally significant project defined in the Regional Transportation Plan that does alter the number of through lanes, lane capacity, or speed classification as defined in the travel model is considered a significant change in concept and scope.
- 5. Advancing or delaying the planned implementation of a regionally significant project that does not result in a change in the transportation network described in the travel model for any horizon year (as defined in CFR 93.101) is not considered a significant change in concept and scope.
- 6. Advancing or delaying the planned implementation of a regionally significant project that does result in a change in the transportation network described in the travel model for any horizon year (as defined in CFR 93.101) is considered a significant change in concept and scope.
- 7. Project changes not addressed in the above statements will be decided on a case by case basis through consultation by representatives from DAQ, WFRC, MAG, UDOT, UTA, FHWA, FTA, and EPA.

## Appendix-2

### Highway and Transit Projects Amended 2011-2040 RTP

Salt Lake and Ogden Areas

### Amended 2011-2040 RTP HIGHWAY PROJECTS LIST

### **Project Amendments to the 2011-2040 RTP**

#### Project Description Weber County

**Interpretable into an example of the strength into a strength** 

Funding: SB229 - \$12M for Weber Co. portion (total project \$68M)

**RTP Amendment:** Move the project from Phase 3 to Phase 1

### **Davis County**

**500 S. and I-15 Interchange Operational Improvements** – UDOT has requested this project be amended into Phase 1 of the RTP as an Operational Improvement project. This project will convert the current interchange to a diverging diamond in conjunction with a bridge deck replacement project. The current project in the RTP, is an interchange reconstruction project in Phase 3, will remain in Phase 3.

Funding: \$7M Bridge Funds

RTP Amendment: Include the project as Operational Improvement in Phase 1.

**2600 S. and I-15 Interchange Operational Improvements** – UDOT has requested this project be amended into Phase 1 of the RTP as an Operational Improvement project. This project will convert the current interchange to a diverging diamond in conjunction with a bridge deck replacement project. The current project in the RTP, is an interchange reconstruction project in Phase 3, will remain in Phase 3.

Funding: HB173 - (\$7M) and \$7M Bridge Funds

RTP Amendment: Include the project as Operational Improvement in Phase 1.

### Salt Lake County

**Cottonwood Street, (one-way couplet on Hanauer St. and Box Elder St.) Vine St. to 4500 S., Murray** – *Murray City has requested this project be included in Phase 1 of the RTP. The environmental analysis was completed in June of last year recommending a one-way couplet on Hanauer and Box Elder Streets. This project will connect (extend) Main Street from 4500 S. to Vine St. The city has funding to begin right-of-way purchase.* 

Funding: HB242 - \$100K

**RTP Amendment:** Move the project from Phase 2 to Phase 1 and amend its scope.

**Monroe Street, 10000 S. to 10200 S., Sandy** – Sandy City has requested this project be included in Phase 1 of the RTP. This project is the final segment of an overall facility which will connect 10600 S. and 9000 S. HB 173 funding will allow completion of tall but the last ½ mile of the facility.

Funding: HB173 - \$2.3M

RTP Amendment: Include the project in Phase 1 of the Plan.
